

TWIN BOOMS INCREASE PRODUCTIVITY

PUTS TOOLS WHERE NEEDED...OUT OF WAY WHEN NOT NEEDED

If you need to put tools into the hands of people working some distance apart on a large product (the bow and stern of a boat, for example) take a close look at this twin boom jib. Each boom swings approximately 170° but cannot cross. Stops can be set to allow free swing or to lock boom in straight position and at every 15° in either direction. Unit is not available as a kit, but the individual parts (model numbers shown below) are listed in the Hubbell Workplace Solutions catalog.
